

Protocol-step timeline: LAS adaptor cycle vs base signature (named steps; rejection-sampling Sign/PreSign dominates each path)

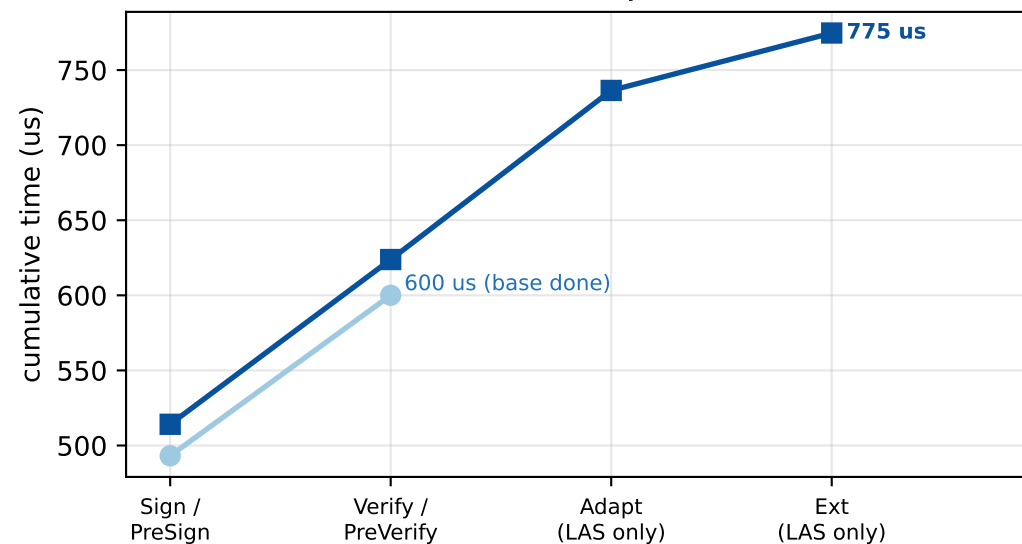

paper (n=4, ell=4) — full LAS cycle +28.5% vs base

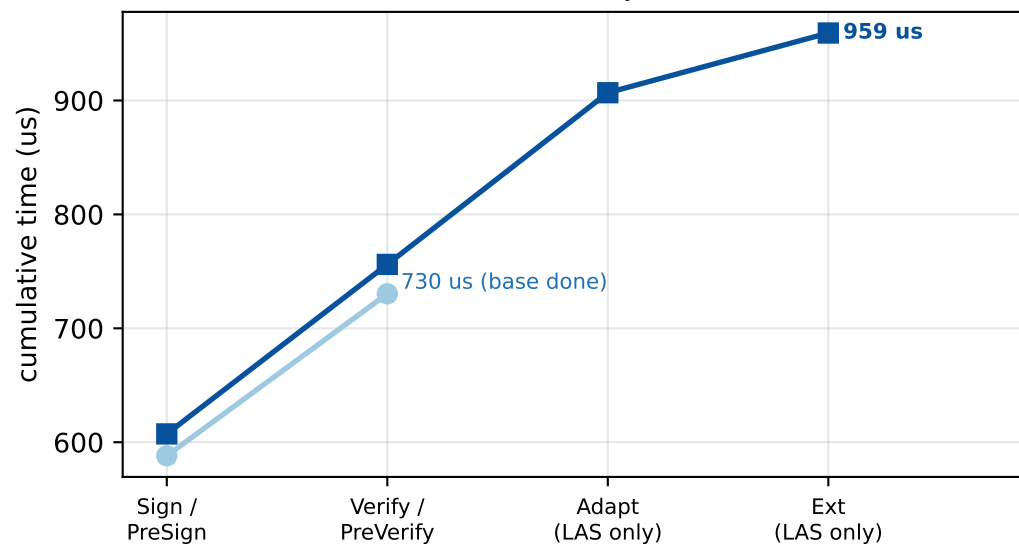

L2 (n=4, ell=4) — full LAS cycle +29.8% vs base

L3 (n=6, ell=5) — full LAS cycle +29.1% vs base

L5 (n=8, ell=7) — full LAS cycle +31.4% vs base

—●— Base path (Sign→Verify) —■— LAS path (PreSign→PreVerify→Adapt→Ext)
