

LAS benchmark parameter sets (all share the Dilithium ring: $N=256$, $Q=8380417 \approx 2^{23}$)

setting	n	ℓ	$M=n+\ell$	κ	γ	N	Q
LAS-2020/845 reference	4	4	8	60	122880	256	8380417
Simplified Dilithium-II	4	4	8	39	79872	256	8380417
Simplified Dilithium-III (target)	6	5	11	49	137984	256	8380417
Simplified Dilithium-V	8	7	15	60	230400	256	8380417

Settings are LAS parameter sets derived from simplified Dilithium dimensions, NOT formal NIST security levels. κ = challenge weight, γ = rejection bound, $M = n + \ell$ = response-vector dimension, $N = 256$ ring degree, $Q = 8380417$ modulus. Full per-setting meanings: `parameter_sets.csv` / `parameter_sets.tex`.

single thread, -O3, 10 runs x 1000 iters/op; error bars = sample SD
